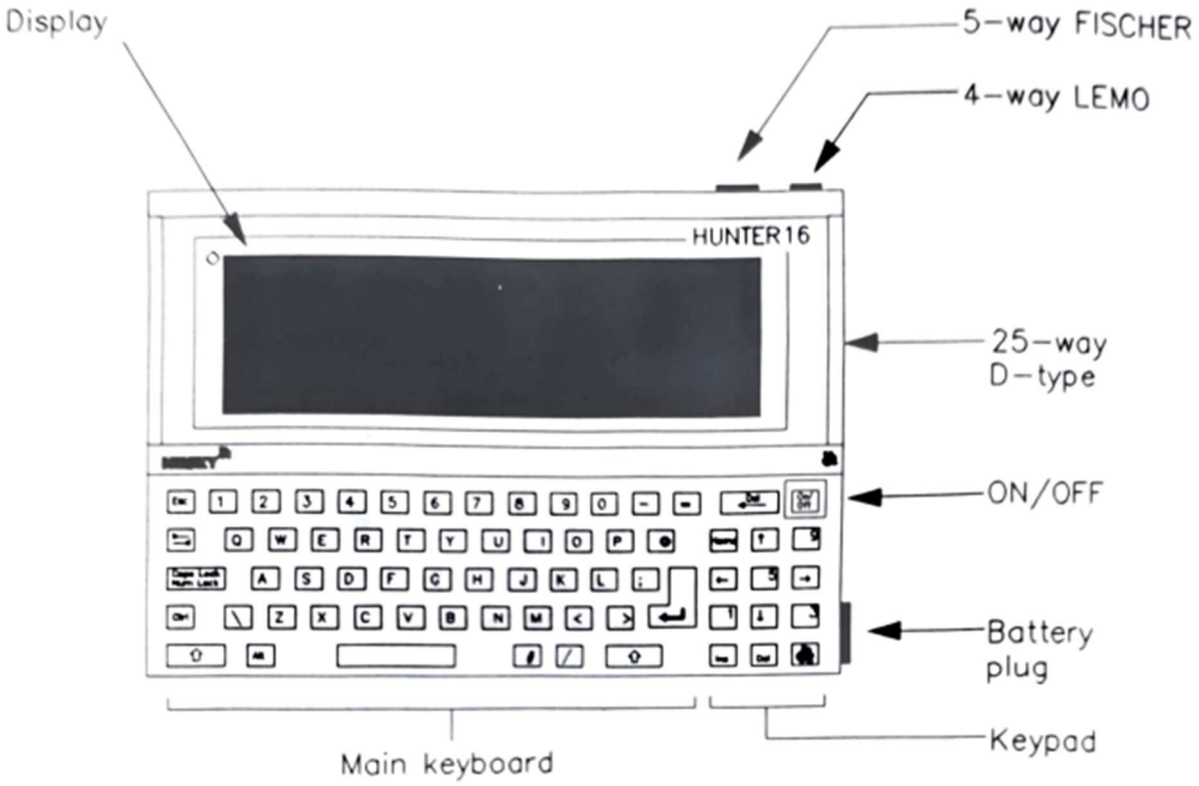
Chapter 1 Welcome to Husky Hunter 16



Husky Computers' **Husky Hunter 16** (**Hunter 16**) is one of the smallest, toughest IBM-compatible computers ever made.

It is resistant to moisture, dust, vibration, shock and electromagnetic interference. But please don't abuse it. Inside the impervious cast aluminium case is some of the most advanced technology money can buy. Don't drop **Hunter 16** needlessly, use it to strike other objects or pile heavy things on top of it.

We know you'll be pleased and impressed with **Hunter 16**. It is a product of many years' experience, developing portable computers. if you have any problems or queries, consult the supplied guides first. If you need more help, please contact your supplier or:

Customer Support Husky Computers Limited,

England

Telephone: (0203) 604040
Facsimile: (0203) 603060

We've done all we can to make Hunter 16 a practical and useful tool, not a frustrating encumbrance. We hope you agree.

1.1 Your Hunter 16 system

Hunter 16 is a complete, ready to use system, consisting of:

- **Hunter 16** with standard software
- This guide (*the Husky Hunter 16 User Guide*)

Additional manuals on specific aspects of the system are available from Husky Computers Limited or your local distributor. These consist of:

- *Application Notes*, which cover use of **Hunter 16** with other peripherals
- The GWBASIC User's Guide
- The MS-DOS Programmer's Manual
- The MS-DOS User Reference

1.2 Features

Measuring just 216.5 x 157.0 x 35.5 mm (8.5" x 6.2" x 1.4") and weighing 1.2 Kg (about 2lb), **Hunter 16** is a completely self-contained computer system. Powerful enough to run a vast range of IBM PC-compatible software, yet small enough to hold in one hand or fit easily into a briefcase.

Hunter 16 can operate all day from internal batteries and is sealed against moisture, dust and other hazards, so you can take it with you and use it almost anywhere that you can go. **Hunter 16** can also be powered by an AC adaptor when this is more convenient.

Hunter 16 includes MS-DOS in ROM, for fast and convenient access at all times.

Its industry standard MS-DOS operating system and IBM PC-compatible hardware architecture mean that **Hunter 16** can run an enormous range of commercially available IBM PC-compatible software, straight off the shelf.

You can also program it using the supplied BASIC, assemblers or other languages. Assembly language access allows full use of its many specialised features.

Data and programs can be exchanged easily with other computers or instruments by using the programmable serial ports or the IBM-compatible 3.5 inch disk drive option.

Hunter 16 can be fitted with a range of RAM sizes, to suit the user's needs. This RAM can be split into main (DOS) memory, RAM disk and EMS memory.

The RAM disk is configured as drive C and can be used to store data and program files. Since its contents are preserved even while turned off, this provides the advantages of a built-in hard disk, without the disadvantages of extra weight, cost or fragility.

WARNING: NEVER attempt to open the case- there are no user serviceable parts inside and you will probably ruin the sealing.
