Chapter 3 Using this guide

3.1 Structure

This guide is divided into four main parts:

Part 1: Introduction	A brief introduction to **Hunter 16** and this guide, that you should read first.
Part 2: Operating	An introduction to using **Hunter 16** and details of commands and operating procedures not covered in the other guides. You may need to read this in conjunction with the *MS-DOS User's Reference* if you are not already familiar with using MS-DOS.
Part 3: Technical Reference	Technical information for programmers, describing the overall structure, software interrupts available, hardware interrupts used and device emulations. You should read this in conjunction with the MS-DOS Programmer's Manual if you are not already familiar with programming under MS-DOS 3.3. You may also need to refer to hardware descriptions (such as the IBM PC-XT Technical Reference) if you are not already familiar with IBM PC hardware.
Part 4: Appendices	Summary technical data, for ease of reference.

There is also a detailed index, at the end of the guide.

3.2 Suggested reading approach

Whatever your interests, you should start by reading the rest of this part of the guide (Introduction). Then:

To learn about:	See:
Using Hunter 16	Chapters 4 to 7.
An introduction to MS-DOS	The MS-DOS User's Reference.
The standard MS-DOS commands	The MS-DOS User's Reference.
The extra Hunter 16 commands	Chapters 8 to 10.
Using your application Hunter 16	The application's user guide, modified in the light of Chapters 5 and 9
Installing an application	Chapter 15 and the application's installation instructions.
Connecting a peripheral	Chapter 11 and Appendix G.
Writing software specifically for Hunter 16	Chapters 17 onwards and the MS-DOS Programmer's Manual.
Writing software for Hunter 16 and other MS-DOS computers	The MS-DOS Programmer's Manual.
Adapting MS-DOS software for Hunter 16	Chapter 16.
Programming in GWBASIC	The GWBASIC User's Guide.

3.3 Conventions

Throughout these guides, a few simple conventions are used to help clarify descriptions. These are mainly used to indicate text to type, as follows:

DIR	this is text which should be typed exactly as shown. If you prefer, you may type it as the equivalent small letters (d i r).

filename	this is a description of text to type, rather than the actual characters. In this case, you should type the name of file (for example, PROGRAM1).
[KEY]	this is a name or symbol representing the key that you should press or hold down. In most cases, the name is the same as appears on the key. *NOTE: This is a change from original manual due to character availability on scanned documents*.
[,A]	this is an optional part of the text ie text which may be omitted or typed, depending on what you want to do.
`Enter new date`	text as it appears on the screen

These conventions are often used in combination. For example:

DIR [*filename*] [ENTER]	means type D I R and then a space, then either press the [ENTER] key, or type the name of a file and press [ENTER]
